

IJIS Broker Integrator

Secure Information Exchange Between Systems and Agencies

IJIS Broker/Integrator is a universal adaptor for data systems. Share information securely, accurately, and efficiently with all agencies in your network. No matter what language your system or others are using, it works seamlessly across environments to ensure users on all ends have the data they need.

Your agency can:

- Use a single tool for all data exchanges
- Let business processes drive data exchange
- Clearly define your data exchanges, setting up either real-time transfers or scheduled information-sharing events
- Exchange data with any agency or system in or out of the justice system
- Ensure the highest standards of privacy and security in all exchanges

KEY FEATURES:

Captures information once at the point of origin and reuses it throughout the system

Natively processes GJXDM, NIEM, XBRL, and ECF-based transactions

Easily imports/exports all metadata formats

Provides hundreds of standards-compliant exchanges and interfaces with hundreds of partners

**ACCESS TIMELY, ACCURATE
DATA WHENEVER YOU NEED
