

Judicial Tools

Flexible, efficient software for judicial officers

Judicial Tools is a comprehensive case management tool designed specifically for judges and magistrates.

From the moment a new case is received through final post-sentence monitoring, judicial officers can efficiently review, manage and update case files from anywhere, on any device. It's the one tool your judicial team needs for effective case management and at-a-glance decision support.

Judges can:

- Focus on the data, not on navigating the system
- Actively manage cases both in chambers and on the bench, and create location-specific case views to zero in on the work at hand
- Easily drill down into case details or view a quick snapshot of key data
- Configure dashboards by court, role, team or individual to see case flow and performance
- Access case histories, participant details, status of case activities and more all in one place

Judicial Tools is a research-based, judge-centric software solution that can redefine efficiency in your courts. Fast, intuitive, and configurable. That's Judicial Tools.

KEY FEATURES

- Personalized views and dashboards
- Visual layouts
- Configurable for all case types
- Easy-to-use calendar
- Fast, flexible search function
- Task queues to help structure to-do's
- Customizable notifications and alerts
- Phone and tablet friendly
- Pre-filled document templates
- Seamless integration into any CMS

A Better Way to Manage Cases and Workloads

- » At-a-glance decision support
- » Easy-to-use calendar
- » Configurable work and document review queues
