

CourtView

Case Management

Complete Information Management for Courts

From case management to court administration, CourtView is the one technology solution you need to boost efficiency and connectedness in your court.

CourtView works YOUR way, allowing you to tailor key functions and settings to your current processes. What you need is always at your fingertips with CourtView's sophisticated tracking features that can help you zero in on a case, document, participant, or activity.

Court personnel can:

- Configure parameters, code tables, and security settings to fit your court's preferences and procedures
- Secure or restrict case types, specific cases or individuals, or partial records
- Classify and track relationships, documents, evidence, files and more, even as they are routed from one location to another
- Schedule and update events with judges and locations
- Manage finances with dual entry accounting including rolled-up payment plans across cases and joint/several liability

CourtView is a highly configurable web-based system designed to maximize efficiency and streamline tasks in your court.

Key Features:

- Service-oriented architecture that supports data-sharing
- Comprehensive search function
- Dynamic content-builder
- Standard and ad hoc reporting
- Optional batch processing
- Streamlined case intake
- Pairs seamlessly with:
 - **Judicial Tools** for judges & magistrates
 - **CV2Go** automated notifications for attorneys
 - **eServices Suite** for easy court access for community members

Keep Justice Moving Efficiently with CourtView

- Highly configurable web-based system
- Easy file tracking and updating
- Service-oriented architecture
